

Errata to “Lower Bounds on the Probability of Error for Classical and Classical-Quantum Channels”

Marco Dalai

In the published paper, Figure 3 looks like this

There is clearly an error in the plot since $E_x(1)/1$, which is the cutoff rate, exceeds the capacity of the channel. That is due to a bug in the Matlab code for the plot. The correct figure should look like this

This error has no impact on the paper, except that for this example $\bar{\rho} = \rho_{\max} \approx 1.44$ and not 2.88 as stated in the text.
